The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3 and 12-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Trcka in view of Coates.

Trcka shows a stanchion in a generally upright position pivotably moveable relative to the frame 10,18,20,30. The frame includes an elongated rail member 13. Figure 2 shows the lowered position of the stanchion and Figure 1 shows the raised upright position of the stanchion. The stanchion is manually brought to the work engaging position by a user pushing down on a lever.

Coates shows a pivotable stanchion 4 that is automatically biased into the work engagement position by means of an offset spring 6.

To bias the Trcka stanchion to the generally upright work engagement position by means of an offset spring would have been obvious for one skilled in the art at the time the invention was made in view of the disclosure of Coates. One of ordinary skill in the art would have been motivated to do this in order to reduce the manual effort required to place the stanchion in the work engagement position. While Coates employs a single spring to have employed a plurality of springs would have been no more than an obvious duplication of the teachings of Trcka. Statements of intended use as what objects will be placed on the bench is a matter of intended use that has no

patentable significance. In any case, the Trcka bench rail is capable of receiving a stack of thin panel members which may abut the upright stanchion of Trcka.

Claims 4-11 and 14-15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
